SUMMARY

Unity developer with 5+ years of experience shipping mobile and PC games across strategy, card, puzzle, idle, hyper-casual and military genres. Leads Unity development on teams of up to 10, from prototype to release: gameplay, UI, tools, monetization and live-ops, release builds and engine upgrades. Strong in game design, monetization and advertising, and in applying AI tools to game production. Also teaches software engineering at university.

SKILLS

Engine and languages	Unity (5+ years), C#, C/C++, URP, Shader Graph, VFX Graph, Editor tools
Architecture	OOP and SOLID, Zenject (DI), UniTask, R3, state machines, command pattern, ECS-style design
Libraries	DOTween, Spine, Addressables, Cinemachine, Timeline, NavMesh, Odin Inspector, Unity Localization, I2 Localization
Monetization and advertising	In-app purchases, ad mediation (LevelPlay, AppLovin MAX, Appodeal), rewarded and interstitial placement, HTML5 playable ads, ad-creative builds, Firebase Remote Config, AppsFlyer, Adjust, AppMetrica, GameAnalytics
AI	AI-assisted development with LLM coding assistants, AI tools for prototyping and content, Editor extensions that speed up production
Platforms	Android, iOS, Steam (Windows, macOS), WebGL
Tools	Git, Visual Studio, Android Studio, Jira, Trello, Notion, draw.io, Microsoft Visio
Game design	Core loops, level design, economy and balancing, progression, sound design

EXPERIENCE

Software Engineering Teacher — University of Economics and Entrepreneurship Aug 2026 – Present

- Teach software engineering and computer science to university students, full-time, on-site in Khmelnytskyi.
- Bring production game-development practice into the courses.

Lead Unity Developer — Raccoons Games 2024 – Present

- Lead Unity development of mobile and PC strategy, card and puzzle games in teams of 4–10.
- Architect gameplay, UI and meta-game systems with Zenject, UniTask, DOTween and Spine: per-phase state machines, undo through the command pattern, deterministic auto-battles and AI opponents.
- Own releases: production Android and iOS builds, Unity 6 upgrade, Android API 36 migration, SDK and dependency fixes.
- Integrate and tune monetization and live-ops: in-app purchases, ad mediation, Firebase Remote Config, attribution and analytics.
- Built an HTML5 playable ad (Phaser, TypeScript) for AppLovin and Google Ads from the game's own content.
- Balance and tooling: a Python simulator that tuned 300 puzzle levels, Editor exporters for remotely delivered levels, configs kept in sync with the GDD.
- Keep a very large code base (about 9,600 runtime C# files, about 166 playable countries) responsive with tick-based simulation, and remove soft locks and save-loading bugs.

- Built Android hyper-casual, casual, idle, hybrid and military arcade games in teams of 3–8.
- Integrated publisher and monetization SDKs: AppLovin MAX, Adjust, AppsFlyer, GameAnalytics, Facebook, IronSource, Kwalee, Lion Studios, Voodoo TinySauce.
- Reworked and updated existing projects: shaders, Unity settings, mobile performance.
- Covered game, level and sound design alongside programming.

SELECTED PROJECTS

- **Throne Siege: RTS Strategy** *Android, iOS, Web*
2D tactics card game with auto-battles, 12 arenas and a full meta game (Unity 6, Zenject, UniTask, Spine).
- **Countryballs: Power Protocol** *Steam, Android, iOS*
Grand strategy on a real-world map with about 166 nations, diplomacy, economy and DLC wars.
- **NWO** *Steam*
2D grand strategy where the diplomacy, influence and army AI systems were designed.
- **Math Solitaire** *Android, iOS, playable ad*
300-level solitaire puzzle with 10 languages, a hint engine and live-tunable levels.
- **KidsProject (WalkSafe)** *Android, iOS*
3D educational game with six mini-games, Timeline cutscenes and Addressables (Unity 6).
- **The Last Outpost** *Android, iOS*
Military defence game with 78 levels and about 29 enemy types, fully data-driven.

More than 30 shipped and prototype games, with screenshots and gameplay clips, in the portfolio.

EDUCATION

Lviv Polytechnic National University — Master's degree, Computer Engineering

Aug 2023 – Jan 2025

Lviv Polytechnic National University — Bachelor's degree, Computer Engineering

2019 – 2023

LANGUAGES

English – upper-intermediate · Ukrainian – native

STRENGTHS

Game design · Monetization · AI tools · Teaching · Leadership
